SUMMARY

Full Stack Developer with 2.4 years of experience building scalable web applications end-to-end — from React.js front ends to Python/Django REST Framework back ends. Experienced in designing REST APIs, implementing authentication and authorization, and building role-based, multi-tenant platforms and internal productivity tools, with a strong focus on performance, security, and clean, maintainable code across the stack.

TECHNICAL SKILLS

Frontend: React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Redux, Responsive Web Design

Backend: Python, Django, Django REST Framework (DRF), REST API Design, JWT/Token-Based Authentication, ORM Data Modeling

Database: MySQL, Database Design & Query Optimization

Tools & Practices: Git, GitHub, Postman, Agile/Scrum, Unit Testing, Code Reviews, Debugging, CI/CD Basics

Core Strengths: Full Stack Application Design, Role-Based Access Control (RBAC), API Security, Workflow Automation, Performance Optimization

PROFESSIONAL EXPERIENCE

Software Developer

Jun 2024 – Present

Omnics Technologies Pvt Ltd — India

- Developed admin and customer-facing interfaces for a multi-tenant compliance management platform, implementing partner onboarding, customer account management, and regulation/task workflows with role-based access control (RBAC)
- Worked as backend developer on an internal employee management system, designing and building REST APIs with Python and Django REST Framework for authentication, employee directory, project tracking, and file management modules
- Designed a token-based authentication and authorization system (login, session/JWT handling, and role-based permissions) consumed by both web and admin interfaces
- Built the leave request and approval workflow end-to-end, including manager actions and status tracking
- Created a reusable drag-and-drop email template builder adopted across multiple products; later published it as an open-source npm package
- Built an in-app bug-reporting tool with screenshot capture, helping the support team resolve issues faster
- Delivered multilingual support (4 languages) for the compliance platform and added private/group messaging, account settings, and a multi-step onboarding wizard to the internal employee tool
- Improved page-load performance on high-volume regulation/task listing screens and optimized backend queries to reduce response times

KEY PROJECTS

Admin Compliance Master — Compliance Platform (Admin Panel)

- Built the admin panel for a multi-tenant compliance platform, covering partner onboarding, customer accounts, and user role configuration
- Localized the platform into 4 languages, enabling partner firms to operate in their preferred language

Customer Compliance Master — Compliance Platform (Customer Portal)

- Built the customer-facing portal for managing regulatory tasks, questionnaires, and compliance workflows with role-based permissions
- Optimized performance on screens listing large volumes of regulations and tasks; added document preview and reporting for compliance files

Omnics Manager — Internal Employee Management System (Full Stack)

- Backend developer: designed and built the authentication module (login, token/session handling, role-based permissions) and REST APIs for the employee directory, project tracking, file management, and leave workflow, using Python and Django REST Framework
- Built the React front end for the employee directory, project-tracking module, and file manager, plus private/group messaging, account settings, and a multi-step onboarding wizard

ACHIEVEMENTS

- Secured 2nd rank in a university-level coding competition
- Published an open-source npm package for a React email editor — npmjs.com/package/react-tailwind-email-editor

EDUCATION

- B.Tech, Computer Science Engineering — GITAM University — CGPA: 8.97
- Intermediate (MPC) — 927/1000
- SSC — 8.5 CGPA
